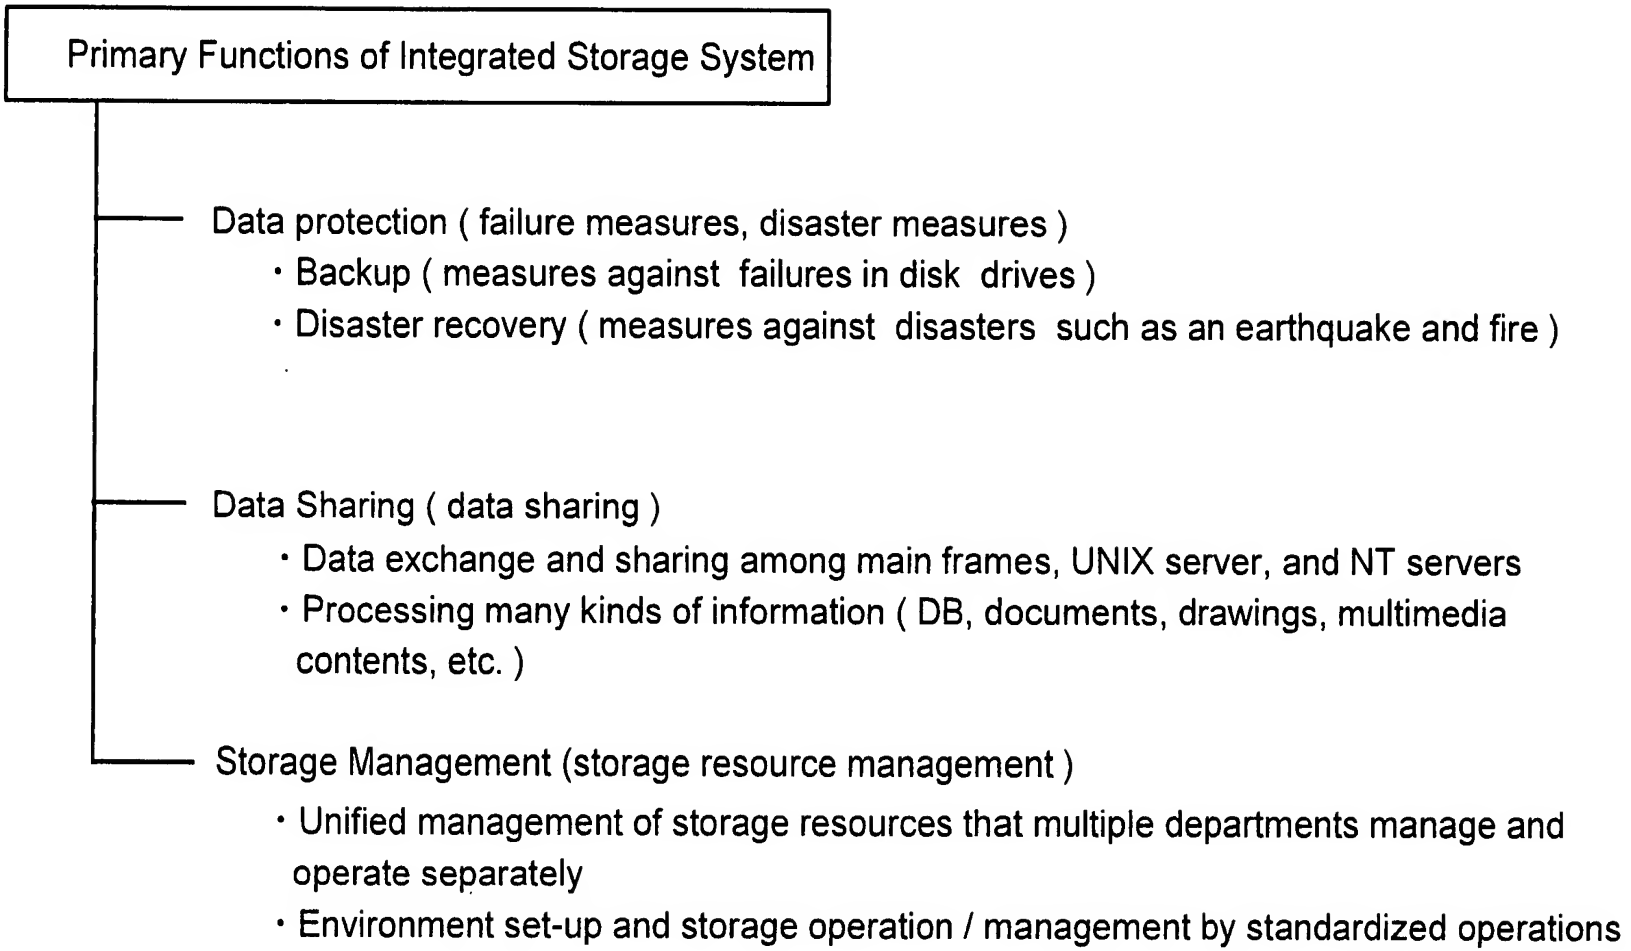
Tape unit, etc

FIG.3



Primary Functions of Integrated Storage System
Data protection (failure measures, disaster measures)
・Backup (measures against failures in disk drives)
・Disaster recovery (measures against disasters such as an earthquake and fire)
Data Sharing (data sharing)
・Data exchange and sharing among main frames, UNIX server, and NT servers
・Processing many kinds of information (DB, documents, drawings, multimedia contents, etc.)
Storage Management (storage resource management)
・Unified management of storage resources that multiple departments manage and operate separately
・Environment set-up and storage operation / management by standardized operations

FIG.4

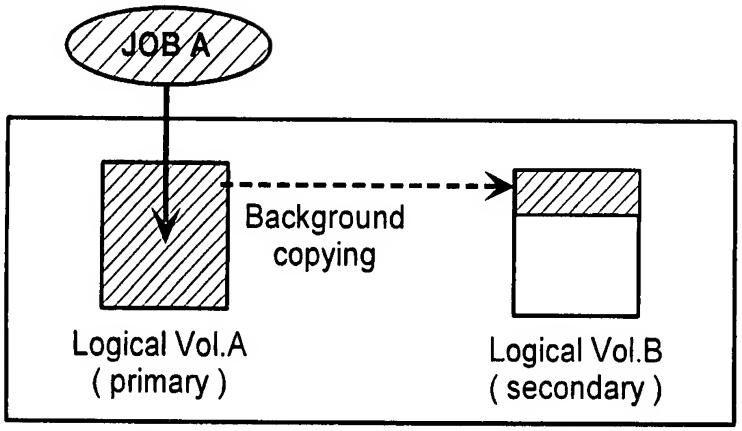
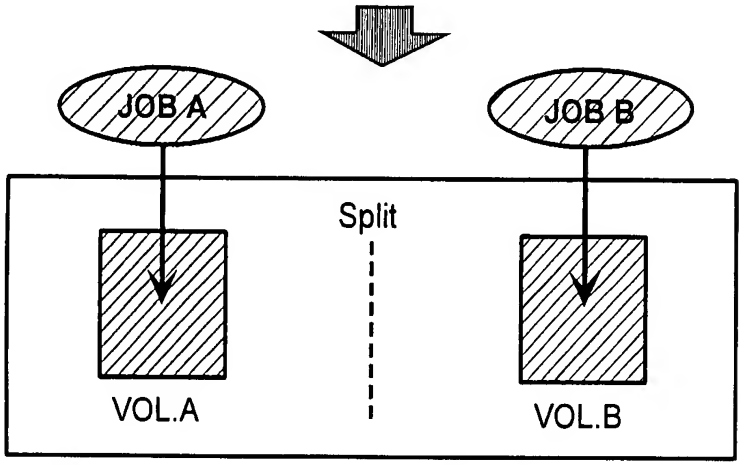
Tape unit
③ Pair split
④ Backup
Primary
Secondary
Replica
① High-speed background copying by a function in a storage (Pair generation / copying)

FIG.5a

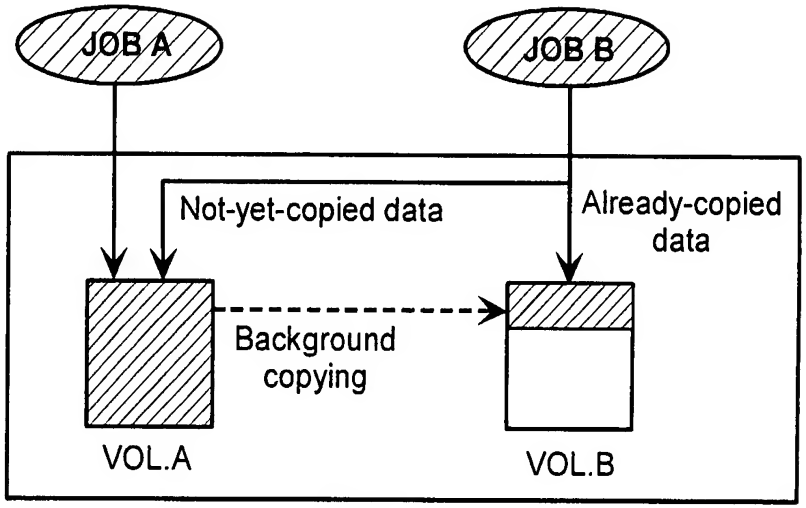


Makes a copy in the background in advance.



After copying is complete, the secondary volume is split and is available for another job to use.

FIG.5b



- Apparently, the secondary volume is split immediately and is available for another job to use.
- Actual data is copied from the primary volume in the background.

FIG.6

Backup via LAN
LAN
Backup server
Tape unit
LAN-free backup
LAN
SAN
Tape library
Server-less backup
LAN
SAN
Tape library
・Data is copied from disk drives to a tape unit via a LAN, so loads are put on a LAN
・Speeding up by copying data from disk drives to a tape unit via a SAN (Reduction in the load of a LAN)
・Speeding up by copying data directly from disk drives to a tape unit (The data processing on servers is almost removed, resulting in reduction in the load of a servers)
